### 1. Launching Q-Book

[Kevin Ramlal Homepage](#)

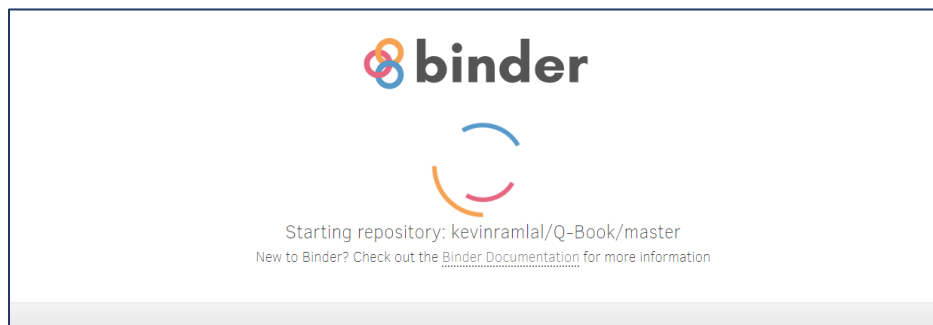

## Overview

Q-Book is a python based limit order book simulator designed to showcase the basic functionality of real-world limit order books. Using a GUI, users can experiment with different settings for market orders, limit orders, cancellations, as well as see a market-making algorithm in action!

## Launch Q-Book

Opens up a Binder containing QBook Jupyter Notebook. For instructions on usage see *Q-Book Quickstart Guide*. Note this may take a few minutes if it's the first time launching!

- Click “Launch Q-Book” link in the Q-Book homepage. This will bring up a *Binder* containing a Jupyter notebook. If it is your first time running the Binder, it may take a few minutes to build. Upon clicking the link, you should see a page like this:

- After a few moments, the Jupyter Notebook should appear as this:

```
In [1]: from qbook import *
QBook_GUI()
VBox(children=(VBox(children=(Button(button_style='danger', description='Generate Q Book', style=ButtonStyle(b...
```

- Click on the first code cell where it says *“from qbook import ...”* (you know you’ve selected the cell when it is outlined in green).
- Hit **SHIFT+Enter** at the same time to **run** the cell.
- After a few moments, the following should appear:

**Generate Q Book**

**Time Steps**      **Market Settings**      **Limit Settings**      **Cancel Settings**

Time:       Order/Sec:       Order/Sec:       Order/Sec:

Market Maker      Vol/Order:       Vol/Order:

Time Step:  0

Level	Bid_Vol	Bid Total	Bids	Asks	Ask Total	Ask_Vols

Market Orders    Limit Orders    Cancels

- This is the Q-Book GUI, initialized with the default settings.

## 2. Adjusting Settings in Q-Book

- Using the Settings “Panel” displayed at the top the Q-Book GUI, we can adjust several features of Q-Book, such as the rate of order and cancellation arrivals, as well as the volume per order. We can also switch on/off the market making algo, which is discussed in the next section.

Generate Q Book

<b>Time Steps</b>  Time: <input style="width: 80%;" type="text" value="30"/>  <input type="checkbox"/> Market Maker	<b>Market Settings</b>  Order/Sec: <input style="width: 80%;" type="text" value="4"/> Vol/Order: <input style="width: 80%;" type="text" value="20"/>	<b>Limit Settings</b>  Order/Sec: <input style="width: 80%;" type="text" value="2"/> Vol/Order: <input style="width: 80%;" type="text" value="50"/>	<b>Cancel Settings</b>  Order/Sec: <input style="width: 80%;" type="text" value="2"/>
---	---	--	---

- Q-Book is launched with the default settings above. Suppose now we wanted there to be a total of 45 time-steps instead of the default 30. We can type this in directly in the *Time* setting’s box. Likewise, we can edit any of the setting boxes we see.
- Once new settings have been typed into their respective boxes, we need to **Re-Generate Q-Book by hitting the “Generate Q-Book” button**.

Generate Q Book

<b>Time Steps</b>  Time: <input style="width: 80%;" type="text" value="45"/>  <input type="checkbox"/> Market Maker	<b>Market Settings</b>  Order/Sec: <input style="width: 80%;" type="text" value="4"/> Vol/Order: <input style="width: 80%;" type="text" value="25"/>	<b>Limit Settings</b>  Order/Sec: <input style="width: 80%;" type="text" value="2"/> Vol/Order: <input style="width: 80%;" type="text" value="50"/>	<b>Cancel Settings</b>  Order/Sec: <input style="width: 80%;" type="text" value="2"/>
---	---	--	---

- By Changing the Time setting and regenerating Q-Book, we now see there are 45 time-steps.

Generate Q Book

<b>Time Steps</b>  Time: <input style="width: 80%;" type="text" value="45"/>  <input type="checkbox"/> Market Maker  Time Step: <input style="width: 80%;" type="range" value="45"/>	<b>Market Settings</b>  Order/Sec: <input style="width: 80%;" type="text" value="4"/> Vol/Order: <input style="width: 80%;" type="text" value="25"/>	<b>Limit Settings</b>  Order/Sec: <input style="width: 80%;" type="text" value="2"/> Vol/Order: <input style="width: 80%;" type="text" value="50"/>	<b>Cancel Settings</b>  Order/Sec: <input style="width: 80%;" type="text" value="2"/>

### 3. Activating Market Maker Algo

- Using the **default settings** upon Q-Book launch, the market maker is **disabled**, as shown in the *Market Maker* tab at the bottom.

- To **activate the Market Maker**, click the **Market Maker checkbox** in the **Settings Panel**, and Re-Generate Q-Book.

- The Market Maker Tab will now show activity.
